LeetCode: leetcode.com/u/ShadyOp/

Summary

Detail-oriented B.Tech Computer Science undergraduate at Siksha 'O' Anusandhan University (CGPA 8.27) with hands-on experience in full-stack web development and applied AI. Shipped a Retrieval-Augmented Generation pipeline that combines vector search, computer-vision forensics, and provider-agnostic LLM augmentation, alongside a production-shaped MERN-stack rental platform. Comfortable owning a feature end-to-end — from REST API design and database modelling through to UI integration. Strong fundamentals in Data Structures & Algorithms; 100+ problems solved on LeetCode. Seeking software-engineer roles where I can contribute to real, user-facing systems.

Education

Siksha 'O' Anusandhan University, Bhubaneswar

Bachelor of Technology (B.Tech) — Computer Science and Engineering

CGPA: 8.27 / 10

Guidance English Medium School, Bhubaneswar

Higher Secondary (12th)

83%

DAV Public School, CDA, Cuttack

Secondary (10th)

85%

Projects

OmniGuard AI — Real-Time Multimodal Verification Dashboard

Python, Streamlit, FastAPI, OpenCV, ChromaDB, sentence-transformers, yt-dlp, OpenAI

January 2026

- Built an end-to-end verification dashboard that scores veracity (0–100) for a news article, video link, image, audio clip, or social-media thread by fusing a forensic pipeline, a RAG cross-reference engine, an OpenCV vision layer, and an optional LLM augmentation step.
- Implemented a **RAG engine** on **sentence-transformers** + a local **ChromaDB** store of trusted truths, with a **DuckDuckGo** live-web fallback and a 0.65 cosine-similarity threshold to filter off-topic matches.
- Designed a **forensic OpenCV vision layer** (8+ per-frame signals: colour-cast, JPEG blockiness, luminance variance, edge density) and exposed the pipeline through a **FastAPI** backend with a 50 MB upload cap, a suffix allow-list, and a streaming **yt-dlp** path.
- Wrote a **provider-agnostic LLM layer** (OpenAI + Gemini) with a 60-second cached health probe and a tamper-evident call-evidence ledger.
- **Codebase scale: 2,800+ lines of Python** across 5 utilities (**verifier**, **rag**, **video**, **vision**, **llm**); 8 test files (5 unit + 3 smoke) covering the pipeline, all green.

RentEase — Smart Rental Management Platform

React 19, Vite 7, Tailwind, Express 5, MongoDB (Mongoose 9), JWT, Razorpay

August 2025

- Built a full-stack rental management platform for landlords and tenants, with role-based dashboards (**/api/tenant/***, **/api/landlord/***) covering properties, tenancies, agreements, payments, and maintenance tickets.
- Designed a **Node.js / Express 5** backend with **MongoDB (Mongoose)** models and **JWT + bcrypt** authentication (httpOnly cookies, CORS with credentials), structured as 6 controllers and 6 routers organised by domain.
- Integrated **Razorpay** end-to-end — order creation, signature verification, and payment persistence — over a 6-model Mongoose schema (User, Tenant, Agreement, Payment, MaintenanceTicket, Notification) with referential integrity across rentals.
- Built the frontend on **React 19 + Vite 7 + Tailwind** with React Router 7 routing; wired the UI to the API via Axios with the JWT attached as a bearer token on every protected request.
- **Codebase scale: 1,600+ lines of backend code** (server, routes, controllers, models) and **19 React components** on the frontend (**Pages/ + Components/**).

Skills

Languages: Java, C, C++, Python, JavaScript (ES6+), SQL, HTML5, CSS3

Frontend: React.js 19, Vite 7, React Router 7, Tailwind CSS, Axios, Responsive Web Design

Backend: Node.js, Express.js 5, FastAPI, REST API design, JWT authentication, bcrypt, Mongoose ODM, Razorpay integration

Databases: MongoDB, MongoDB Atlas, MySQL (basics)

AI / ML: sentence-transformers, ChromaDB (vector search), RAG pipelines, OpenAI API, Google Gemini API, OpenCV, Prompt-engineering

Developer Tools: Git, GitHub, VS Code, Postman, Vite, Streamlit, Uvicorn, Pytest

Cloud & Services: MongoDB Atlas, Google Generative AI

Achievements

- Maintained a **consistent academic record of distinction** across 12+ years of formal schooling — **85%** in Secondary (10th, DAV Public School), **83%** in Higher Secondary (12th, Guidance English Medium School), and **8.27 / 10 CGPA** in B.Tech CSE at Siksha 'O' Anusandhan University (top decile of cohort)
- Awarded merit-based scholarships by Siksha 'O' Anusandhan University totalling **INR 30,000+** for consistently strong academic performance across the B.Tech programme
- Solved **100+ problems** on LeetCode across Arrays, Strings, Dynamic Programming, and Graphs, and earned **3 verified badges** — leetcode.com/u/ShadyOp/
- Earned 2 **HackerRank** verified badges — Problem Solving (Basic) and Java (Basic) — demonstrating strong fundamentals in algorithms and object-oriented Java

Certifications

- Data Structures and Algorithms in Java — Apna College
- Problem Solving (Basic) — HackerRank
- Java (Basic) — HackerRank
